Liquid Colours

... convincing - diverse.

## Colour Chart\_Liquid Colours

### REMEI Blomberg Colour Chart

Our range of colours offers a very large number of liquid colours as well as powder pigments. Of course, this colour chart can only give you a rough overview.

Please note that the appearance of the final product depends on many parameters like type of cement, aggregates or admixtures etc. The illustration of the colours is based on a dosage of 5 mass % on grey cement.

For choosing the right colour shade we offer you expert advice. On demand we will conduct tests with your raw materials. Sample cases as well as small sample quantities for your own tests are available on request. Please be informed that we also supply dosage systems. For further information please contact us.

Our colour chart does not include the colour shade you need? We will match the special colour shade – particularly for you.

Product name	Grey Cement
REBAcolor RED 8100	
REBAcolor RED 8103	
REBAcolor RED 8110
